RULES AND REGULATIONS

Temporary Tents Under 400 Square Feet

1. Tents installed as part of the outside seating must be weighted down to withstand the wind load. See manufacturer's listing. Note: All tents not able to withstand our maximum wind speed for our areas per the Building Code of 105 MPH (require 15 LBS per square foot of tent), would need to come down when winds exceed 30 MPH. All temporary tents under 400 square feet need to be weighted to withstand at least the 30 MPH wind speed.
Example: A 10' x 10' tent needs to have 2 LBS per square foot, so $10 \times 10 = 100$ square feet x 2 LBS = 200 LBS for a 10' x 10' tent. These are general guidelines, so each tent manufacturer's listing should be used.
2. Method used to secure tent to the ground. If the tent is being staked, provide a staking diagram from the manufacturer. If it is going to be secured by a heavy weight (such as a filled barrel of water), provide details and specifications.
3. The tent must be no closer than 10' from any other structure on the lot.
4. Tents required to have a minimum of one foot of candle lighting either through natural light or artificial. If electricity is to be added to any tent, it is to be from GFI (ground fault interrupter) type electric outlet. Cords to be protected/covered with approved cord protectors at walkways, etc. If a generator is used it must be 10 feet away from the tent, generator exhaust pointed away from tent, and fuel can storage away from generator and tent.
Note: No tent can be powered from electric in the public right of way (no plugging into tree vaults, etc.).
5. No propane heaters to be used inside any tent. Only approved electric heaters plugged into a GFI electric outlet with cords protected from physical damage can be used, or approved tent heaters that are placed outside the tent and blow air into the tent (the use of tent heaters will require an inspection by the Lombard Fire Prevention Bureau).
6. No Smoking signs shall be visibly posted.

Temporary Tents Over 400 Square Feet

1. Tents over 400 square feet shall meet all provisions of the International Fire Code (must have fire retardant certificate installed, two exits minimum, must meet the 15 LBS per square foot of tent weighting requirements or according to tent manufacturer's listing, etc.).
2. Copy of certificate of flame proofing for tent(s).
3. Provide portable fire extinguishers to be mounted on mast or stay poles, visible for use, for each 2,500 square feet of floor space.
4. No propane heaters to be used inside any tent. Only approved electric heaters plugged into a GFI electric outlet with cords protected from physical damage can be used, or approved tent heaters that are placed outside the tent and blow air into the tent (the use of tent heaters will require an inspection by the Lombard Fire Prevention Bureau).
5. No Smoking signs shall be visibly posted.
